Certificate Task

Library Management System

Objective: Create a system to manage library operations such as book records, user profiles, and borrowing history using REST Framework.

Features Included:

1. **DB Design**:
    - Design a schema on your own with research.
2. **CRUD**:
    - Make CRUD operations based on DB Design.
3. **Proper Comments**:
    - Add meaningful comments to describe models, views, and logic used in the system.
4. **Data Filtering and Searching**:
    - Enable members to search for books by title, author, or genre.
    - Admin can filter borrowing records by member name or due dates.
5. **Data Pagination**:
    - Paginate book lists and borrowing history for efficient display.
6. **Authentication**:
    - Role-based authentication for Admin and Members using Django's built-in system.
7. **Testing and API Documentation**:
    - Include clear API documentation for accessing and managing the library system.
